

Reflection – Interview with the Formats (Kingdom of image formats, challenge 2)

Tobias: By participating in the Interview with the Formats, it helped me understand more about the JPEG, PNG, BMP and TIFF image formats. Before making this project, I initially had full knowledge about JPEG and PNG as they are the common forms of image format while we had a lack of fact regarding how they are different when compared to the BMP and TIFF formats.

Through research, I was able to learn that each one serve various purposes, JPEG and PNG are the widely used while BMP and TIFF are not used that often and are both use professionally. Of the four, TIFF was the most powerful despite not being used that much alongside BMP.

My contribution to the project was to take an approach to this by collaborating with my team to provide ideas, the storyline, and character design, that is, creating an interview where each image format takes on a form of a different character (similar to OS-tans) created using VRoid Studio. Working together enabled us to create a final produce for everyone to enjoy.

Alexia: This Adventure Quest helped me understand why there are different image formats. Before this project, I did not know the usage of JPEG, PNG, BMP and TIFF and their differences. Working on this interview helped me learn about their advantages and disadvantages. I also liked sharing ideas with my group and creating fun presentations. This activity showed me that image processing is being used in many real-world situations. It also helped me learn new concepts in a creative way.

Elham: This adventure quest was a great opportunity to learn more about image formats such as JPEG, PNG, BMP and TIFF. The most important point I learned is that there is no single best image format. It all depends on how we want to use it. For simple social media images, we can use JPEG, while for more professional situations like printing, TIFF is a better option. Furthermore, this project taught me that when choosing an image format, we should always consider image quality, storage space, and processing speed. In this interview, we tried to showcase the weaknesses and strengths for each format.

Mellisa: Through this project, I learned that choosing the right format is important because it can affect image quality and file size. I also learned more about lossy and lossless compression concepts and their importance in image processing. Working on the different formats helped me better understand how images are stored and used. I liked our interview idea because it made the information easy to remember and interesting. This activity was a good practice working with my teammates.

Overall, this project provided gave us a clear understanding with a creative approach and that is because this project helped highlight the importance of each file format in a creative and entertaining way while also improving my teamwork and collaboration skills in the process. The interview format made learning format concepts an enjoyable experience.
